

Cancer Surgery in Kolkata

Types of Cancer Surgery

1. Curative Surgery – Removes all cancer tissue in early-stage cancers.
2. Preventive Surgery – Removes precancerous tissue.
3. Diagnostic Surgery – Collects tissue for biopsy and staging.
4. Staging Surgery – Determines cancer spread.
5. Debulking Surgery – Reduces tumor size when complete removal isn't possible.
6. Palliative Surgery – Eases symptoms in advanced stages to improve quality of life.

Surgical Techniques

1. **Open Surgery** – Traditional method with larger incisions.
2. **Minimally Invasive Surgery** – Uses smaller incisions with a camera (laparoscope) and special instruments for faster recovery and fewer complications.
