

Head and Neck Surgery in Kolkata

What it involves?

Head and neck surgery treats both benign and malignant conditions in areas including:

- Mouth
- Throat
- Sinuses
- Neck
- Thyroid
- Trachea
- Larynx (voice box)

Common Procedures

1. **Neck Dissection** – Removal of lymph nodes with cancer spread.
2. **Laryngectomy** – Partial or total removal of the voice box.
3. **Thyroidectomy** – Removal of the thyroid gland.
4. **Tumor Excision** – Removal of tumors in the oral cavity or neck.

5. **Reconstruction** – Restoring appearance and function post-surgery.
