

Micro Ear Surgery in Kolkata

Overview

Microscopic ear surgery (Microscopic Otologic Surgery) is a minimally invasive procedure using a surgical microscope and precision tools to treat:

- Chronic ear infections
- Perforated eardrum
- Hearing loss
- Benign or malignant tumors

Benefits

High Precision: Better visualization for delicate procedures.

Minimally Invasive: Smaller incisions, less trauma.

Faster Recovery: Quicker return to daily activities.

Improved Outcomes: Better hearing restoration and reduced complications.
